

OURO Baseline Module is the online tool for the **SLCA (Sustainability Life Cycle Assessment)**, an analysis method based on decades of scientific research that allows one to evaluate the sustainability period of a product along the entire value chain, taking into account the following parameters:

1) the impact of a product on all of the phases of the life cycle (from the extraction of raw materials to the use and disposal of a product)

2) respect of system conditions to evaluate thoroughly a product's sustainability level

3) the present state and the progress made, by measuring the sustainability impact of a product and mapping activities aimed at reducing them.

Excellent	Very Good	Good	Almost Good	Ok	To Improve	Quite Bad	Bad	Unknown
The principles of sustainability are satisfied	The principles of sustainability are mostly satisfied	The principles of sustainability are mostly satisfied	The principles of sustainability are partially satisfied	Only some principles of sustainability are satisfied	Few principles of sustainability are satisfied	Most of the principles of sustainability are not satisfied	The principles of sustainability are not satisfied	Insufficient knowledge to provide an assessment
